EYE WASH STATION TESTING

Eye wash stations are required to be tested monthly to meet regulatory requirements. To test, please pull eye wash station down and let the water run for 15 seconds to allow any rust to pass though, and also monitor the flow of water. If water is dis-coloured even after 15 seconds of flushing, then flush for longer periods of time. If the colour of the water does not clear up after 2 minutes of flushing, or there is no flow of water coming out of the eye wash station, please contact UBC Trouble Calls 604 822 2173 and notify them to fix the problem. After every testing, please make sure you fill out the below information as documentation is required. Thank you.
